

CASE STUDY

Category: Safety

Product: Gloves

Industry: Steel

▶ PROBLEM

A customer was having issues with hand safety. They had recently had two major incidents that had cost the facility both productivity and money.

▶ SOLUTION

Martin was brought in and conducted a survey of the plant to determine the best solution. We brought in one of our hand protection suppliers, and after analyzing the material, the environment, and the customer's history of recordable injuries we were able to recommend a new glove for the high risk area.

▶ RESULTS

After adoption of the new glove there have been no recordable hand injuries.
