

5 Steps to Transform Your Vision into Savings

1

Current State Assessment

Martin Integrated Supply will perform an on-site evaluation to identify and understand current MRO processes and storeroom inventory. Assessment will include a Total Cost of Ownership summary that we will review with you before moving on to the next phase.

2

Solution Design

Once we have identified areas for improvement in your supply chain, we'll collaborate with you to determine the scalable solutions that best suit your needs.

3

Business Case Review

After the initial assessment and solution phase is presented, we'll review your Total Cost of Ownership savings expectations. This review will include both hard and soft savings, as well as the service measurables. It will be in this phase we begin discussing the next steps of implementation and reporting.

4

Program Implementation (4-12 weeks)

After the initial assessment and solution phase is presented, we'll review your Total Cost of Ownership savings expectations. This review will include both hard and soft savings, as well as the service measurables. It will be in this phase we begin discussing the next steps of implementation and reporting.

5

Savings Report

Once program is fully implemented or at "go live", we'll begin reporting the savings and improvements back to you based on a set of predefined metrics.
