

MARTIN **STOREROOM RESET PROGRAM**

Martin's Storeroom Reset Program transforms your MRO storeroom into a well-organized environment, giving you ready access to all your supplies, parts and tools and the ability to operate more efficiently and cost effectively. In a simple four-step process, we assess your storeroom, provide data-driven feedback on how to optimize inventory, and create a plan to organize and reset your storeroom. Then, we get your storeroom in order. Plus, we give you the tools to maintain your world-class storeroom - saving time, money and improving your company's productivity.

Operating an efficient and organized storeroom produces many benefits:

PLANT PRODUCTIVITY

- ▶ Right Part, Right Time, Right Quantity
- ▶ Improves Manufacturing Throughput
- ▶ Reduces Storeroom Costs

WORKING CAPITAL

- ▶ Identifies Obsolete & Excess Inventory
- ▶ Enterprise-wide Inventory Visibility
- ▶ Reduces Purchases
- ▶ Reduces Sub-stock Inventory

MAINTENANCE PRODUCTIVITY

- ▶ Reduces Mean Time to Repair (MTTR)
- ▶ Less Time Looking for Parts
- ▶ More Wrench Time
- ▶ Kitting and BOM Capabilities

INVENTORY MANGEMENT

- ▶ Improves Inventory Accuracy
- ▶ Optimizes Ordering Controls
- ▶ Organizes Storeroom
- ▶ Labeling and Barcode Capabilities

Our Storeroom Reset Experts are ready to create a Custom-Tailored Solution for your storeroom today.

CASE STUDY

CATEGORY: INTEGRATED SUPPLY

SOLUTION: STOREROOM RESET

INDUSTRY: INDUSTRIAL

\$147,600 COST SAVINGS

▶ PROBLEM

A Customer had several decentralized storerooms that were cluttered, not labeled and combined new and used parts. They had no inventory database and no organized method for ordering spare parts, resulting in either too much or not enough inventory to support their maintenance requirements. Oftentimes, the Customer experienced significant machine downtime due to a lack of spare parts onsite. They needed organization, control over their inventory and a process for ordering supplies.

▶ RESULTS

With better controls and visibility of the inventory, plant productivity increased, machine downtime was reduced and the Customer increased production to meet the needs of their Customers. Better defined processes in the storeroom allowed the plant to capture more effective consumption data tied specifically to work orders and equipment allowing for more data-driven decisions. Additionally, the storeroom was easier to navigate and reduced the time maintenance technicians spent looking for parts and supplies while creating more efficient transactions to replenish parts when needed. By starting with the Storeroom Reset and deploying better processes around inventory management, the Customer had the right parts, at the right time and in the right quantity.

▶ SOLUTION

Martin Integrated Supply reviewed the current state of the Customer's storeroom, inventory management and purchasing processes, then collaborated with the Maintenance and Operations leadership to develop a plan and timeline to operate more efficiently. The storeroom was relocated to a centralized area providing fast and easy access to parts. The inventory was cataloged, organized, and labeled. Spare parts were assigned to specific machines providing the Customer a master database enhancing their preventive maintenance processes.

We help companies operate better through custom-tailored solutions.
