BREATHE COOL, STAY SAFE

THE NEW DRÄGER X-PLORE® 1750 NIOSH PARTICLE FILTERING MASK PROVIDES IMPROVED COMFORT AND PROTECTION

In Stock!

For ground personnel working in dusty environments, lung protection is essential. The Dräger X-plore 1750 NIOSH, our next-generation particle filtering mask, offers distinct improvements in comfort and protection. And it's now made right here in the US.

HIGH PERFORMANCE, LOW BREATHING RESISTANCE

The X-plore 1750's CoolSAFE™ filter material combines low breathing resistance and high filter performance in one mask. CoolSAFE provides effective protection against fine dust and particles, according to NIOSH 42 CFR 84 protection levels N95 and R95. An odor version with an active carbon layer to remove unpleasant organic odors below the permissible exposure limit (PEL) is also available.

The soft inner layer is hypoallergenic and repels moisture due to its hydrophobic properties – keeping breathing resistance consistently low when used for longer periods of time.

EASY TO DON AND DOFF

The continuous loop head harness of the X-plore 1750 is constructed from a stable, elastic textile strap that is easily donned and doffed – creating comfort with minimal pressure. The soft, tear-proof elastic easily stretches to fit various head sizes and prevent hair entanglement.

SPACE-SAVING STORAGE, EASY TRANSPORT

Dräger X-plore® 1750 NIOSH masks are flat-folded, saving space and making them easy to transport. Each mask is individually packed in a plastic bag to keep it clean and hygienic.

Reusability	X (maximum one work shift)
Sizes	Universal (all protection classes)
